

STRESSTECH GROUP NOW REPRESENTED IN THE UK BY WRIGHT MANUFACTURING SERVICES LIMITED

Stresstech Group services for gear and other engine component manufacturers are once again available directly from the United Kingdom with the appointment of Wright Manufacturing Services Limited (WMS), based in Stratford-upon-Avon, as the new representative for the Stresstech Group in the United Kingdom and Eire from the beginning of 2009. WMS will now handle the marketing, sales and support of the existing customer base and development of new markets and customers for all of the Stresstech product range and solutions.

Tools for Grinding Quality Control and Process Set-up

The Stresstech Group manufactures, markets and sells instruments and equipment for monitoring the quality, and optimizing the process set-up, of various components, e.g. gear grinding. With over 25 years success in the business, the Stresstech Group has gained a wealth of experience in non-destructive grinding quality verification of gears and other engine parts, such as camshafts, crankshafts, bearings, etc. Stresstech's instruments and measuring solutions are based on Barkhausen noise, X-ray diffraction and hole-drilling interferometry.

Wright Manufacturing Services Limited, founded in 1983, is a well-established company in both the United Kingdom and Eire. It has an excellent reputation as a highly qualified and energetic sole agent of many of the premier European machine tool companies involved in manufacturing and engineering. WMS has always focused on the core business of gear and transmission related manufacturing. It therefore brings a wealth of experience to the Stresstech Group, particularly in the field of cylindrical and gear grinding. This will both complement and enhance the product awareness of the Stresstech Group solutions in these markets.

The existing company structure at WMS will enable them fully to support the Stresstech Group product portfolio and provide a range of complete after-sales services for technical support and spares requirements from a team of service specialists and sales engineers.

Both Stresstech and WMS look forward to a successful, long-term partnership over the coming years. This relationship will only serve to strengthen the continued success of Stresstech technology within the industrial and engineering sectors.
